WEBINAR ON THE ROLE OF EPDS IN THE SELECTION OF PIPE SYSTEMS

Learn about the growing importance of Environmental Product Declarations (EPDs) in the construction industry and how they directly affect products selected for your next project with a useful lunchtime webinar from the BPF Pipes Group.

The webinar is part of a series aimed at improving knowledge and promoting best practice and takes place from 12.00 noon till 13.00 on 2 September. There will be the opportunity for online questions afterwards. It will explain what EPDs and Environmental Impact Categories (EICs) are and how to ask the right questions in relation to an EPD for hot and cold water systems inside buildings. EPDs need to be generated to BS EN 15804, be independently verified and cover all lifecycle stages in an entire pipe installation.

The webinar will be hosted by Franz Huelle, who chairs the BPF Pipes Group's Building Services Working Group and the BSI Committee for Plastics Piping for Pressure applications. Franz has over 20 years' experience in the sector, and is passionate about designing and optimising water supply, heating, underfloor heating and cooling, gas, district heating and sewer pipes for the built environment.

Registration is free at <https://bit.ly/3hHgmNB>

Other webinars coming up in the series include 'The Role Plastic Pipes Will Play in the Delivery of Net Zero' on 20 October and 'Designing Drains and Sewers' on 24 November. More information on each webinar and links to register are available from the BPF Pipes Group's website at <https://www.bfppipesgroup.com/webinars/webinars-overview/>
