BPF PIPES GROUP LAUNCHES NEW PIPE SELECTOR TOOL ON UPDATED WEBSITE

The BPF Pipes Group is launching a new interactive pipe selector tool on its recently updated website www.bfppipesgroup.com, aimed at making it easier to select the right polymer pipes or fittings for the application.

The updated dynamic website is also now more user friendly and optimised for mobile use, for example for those working on site or in remote locations and needing technical information in a hurry. Offering a more personalised experience with the interactive selector tool, it is aimed at providing useful information for those working with polymer pipes across building services, including potable hot and cold applications, central heating, underfloor heating and other areas.

The new pipe selector tool is being launched at the InstallerSHOW on 23-25 June and will then be live on the BPF Pipes Group's website www.bfppipesgroup.com/tools/pipe-selector. It will also be available via the Building Engineering Services Association (BESA) website www.thebesa.com
